The website I am redesining is the Berkshire hathway's website which still looks like websites created in the 90s and does not have a very attractive design, I changed the layout by adding more images to make it more informative and enhance interactions with users by providing images to navigate to their topics of interest. The existing design id not sufficient and confuses the user, my design is simple and yet attractive as it tweaks the current user interface and fulfils the same purpose in a way that would attract the user and make it easier for him/her to navigate. I have only created a mockup, however, when the real design would have more images and a proper color theme such as blue or yellow it will be something user would appreciate as these colors have been adopted by companies such as amazon and have been tested to make user more comfortable. The following are the specifications for my design:-

Project- Berkshire Hathaway Inc.

Description: Header
background- #404040

Logo-
Font family -Poppins-regular
Fpnt size - 40 px
color- white
Alignment- center
Media- company logo

Description: Container

left section-

image box-
background:#e7e7e7

Heading -
Font family -Poppins-regular
Font size - 30 px
color- #000000
Alignment- Left

Media-Page links

link text -
Font family -Poppins-regular
Font size - 18 px
color- #000000
Alignment- Left
Media-Page links

Description: Footer

background-#404040

logo-
Font family -Poppins-regular
Fpnt size - 29 px
color- #fff
Alignment- center
Media-Page links

para-
Font family -Poppins-regular
Fpnt size - 17 px
color- #fff
Alignment- center
